Epic Link: R1.5 P6 Decouple Reservation Svc from Route/Waypoint

GAIA: QA

Sprint: Core Sprint 128, Core Sprint 129

GAIA Build APKS: No

QA Estimate: 3

⌄ Description

Background

See description in the linked Epic. We need to be able to decouple Routes and Waypoints from Reservation Service endpoints.

Currently the https://operatorv2.ninjavan.co/#/sg/route-group page is calling the POST https://api.ninjavan.co/sg/reservation/reservations-with-routes endpoint in order to retrieve the waypoint id and route id in the response. We should deprecate this API, and instead call a Reservation service endpoint to first retrieve the waypoint_id tied to the reservation, and then use the returned waypoint_id to call a Route V2 service endpoint to retrieve the route_id tied to the waypoint.

Technical criteria

Replace the API call to POST https://api.ninjavan.co/sg/reservation/reservations-with-routes –

1. Firstly call the POST https://api.ninjavan.co/sg/reservation/reservations/search endpoint with the same filter criteria.
2. Secondly, with the returned waypoint ids, call the GET https://api-qa.ninjavan.co/sg/route-v2/waypoints?waypoint_ids=252518200,252316602' endpoint to retrieve the waypoints with their route ID based on waypoint IDs.

QA criteria

Ensure that existing functionality on that page remains the same. Dev to provide additional details if necessary.

Check that the number of routed reservations in the route group shows correctly.

This will affect the count of routed reservations in a route group

Showing **1950 of 1950 results**

Test Result: PASSED

NOTE :

please login to https://studio.cucumber.io/users/sign_in first to be able to view the test case steps and login by using your google SSO

Result:

Scenario	Result
Show routed reservation in Route Group Management Page	- Given a route group is created - And some reservations are assigned to it - And some reservations are routed - When user goes to Route Group Management Page - Then verify that Route Group List result shows correct number of Routed/Unrouted Reservations & Routed/Unrouted Transactions PROD: QA: - And verify that the endpoint GET route-v2/waypoints?waypoint_ids=:waypoint_ids is called - When user views route group details

- Then verify that it shows correct total number or routed/unrouted reservations & transactions along with route_id for routed ones
